

AWS Control Status Report

Date of Report: 2025-12-08

1. cloudtrail-all-read-s3-data-event-check

Description: This rule checks if AWS CloudTrail is monitoring all read events on S3 buckets.

Importance: Monitoring S3 read events is crucial for detecting unauthorized access to sensitive data stored in S3 buckets.

Compliance Status: NON_COMPLIANT

Non-Compliant Resources:

- AWS Account:

Recommendation: Ensure that CloudTrail is properly configured to monitor all read events on S3 buckets.

2. iam-password-policy

Description: This rule verifies if IAM password policies are meeting specified requirements for password complexity and rotation.

Importance: Strong password policies enhance security by reducing the risk of unauthorized access to AWS accounts.

Compliance Status: NON_COMPLIANT

Non-Compliant Resources:

- AWS Account:

Recommendation: Update the IAM password policy to meet the required complexity and rotation settings.

3. root-account-mfa-enabled

Description: This rule ensures that MFA (Multi-Factor Authentication) is enabled for the root AWS account.

Importance: Enabling MFA for the root account adds an extra layer of security to prevent unauthorized access.

Compliance Status: COMPLIANT

4. s3-account-level-public-access-blocks-periodic

Description: Checks if account-level public access blocks for S3 buckets are applied periodically.

Compliance Status: INSUFFICIENT_DATA

5. s3-bucket-public-read-prohibited

Description: Verifies that S3 buckets do not allow public read access.

Compliance Status: COMPLIANT

6. s3-bucket-public-write-prohibited

Description: Checks if S3 buckets restrict public write access.

Compliance Status: COMPLIANT

7. subnet-auto-assign-public-ip-disabled

Description: This rule confirms that instances in subnets do not have public IPs automatically assigned.

Importance: Disabling public IPs reduces exposure to potential attacks from the internet.

Compliance Status: NON_COMPLIANT

Non-Compliant Resources:

- AWS EC2 Subnet: subnet-
- AWS EC2 Subnet: subnet-

Recommendation: Disable the automatic assignment of public IPs in the specified subnets to enhance security.
